OPERATORS

Write a simple program that accepts two numbers num1 and num2.

Assign num1 to num2 in the following scenarios:

1. **Assign num1 to num2 by pre-incrementing num1.**
2. **Assign num1 to num2 by post-incrementing num1.**
3. **Swap both values.**

```
using System;
class Program
{
    static void Main()
    {
        Console.Write("Enter num1: ");
        int num1 = Convert.ToInt32(Console.ReadLine());
        Console.Write("Enter num2: ");
        int num2 = Convert.ToInt32(Console.ReadLine());
        num2 = ++num1;
        Console.WriteLine("\nAfter Pre-Increment");
        Console.WriteLine($"num1 = {num1}");
        Console.WriteLine($"num2 = {num2}");
        Console.Write("\nEnter num1 again: ");
        num1 = Convert.ToInt32(Console.ReadLine());
        Console.Write("Enter num2 again: ");
        num2 = Convert.ToInt32(Console.ReadLine());
```

```
        num2 = num1++;
        Console.WriteLine("\nAfter Post-Increment");
        Console.WriteLine($"num1 = {num1}");
        Console.WriteLine($"num2 = {num2}");
        (num1, num2) = (num2, num1);
        Console.WriteLine("\nAfter Swapping");
        Console.WriteLine($"num1 = {num1}");
        Console.WriteLine($"num2 = {num2}");
    }
}
```

OUTPUT

```
Enter num1: 6
Enter num2: 9
After Pre-Increment
num1 = 7
num2 = 7
Enter num1 again: 20
Enter num2 again: 60
After Post-Increment
num1 = 21
num2 = 20
After Swapping
num1 = 20
num2 = 21
```
