

ARRAYS

1)Write a program that finds the number of elements in an array without using built-in features.

```
using System;

class Program
{
    static void Main()
    {
        int[] arr = new int[100];
        int count = 0;
        Console.WriteLine("Enter elements (-1 to stop):");
        while (true)
        {
            int num = Convert.ToInt32(Console.ReadLine());
            if (num == -1)
                break;
            arr[count] = num;
            count++;
        }
        Console.WriteLine("Number of Elements = " + count);
    }
}
```

OUTPUT

Enter elements (-1 to stop):

60

70

80

50

20

-1

Number of Elements = 5

2) Write a program to accept 10 integers into an array and perform the following actions:

- 1. Print the elements in descending order.**
- 2. Find the minimum value and maximum value.**
- 3. Print the sum of all elements.**

using System;

class Program

{

static void Main()

{

int[] arr = new int[10];

int sum = 0;

Console.WriteLine("Enter 10 Numbers:");

for (int i = 0; i < 10; i++)

```
{
    arr[i] = int.Parse(Console.ReadLine());
    sum += arr[i];
}

Array.Sort(arr);
Array.Reverse(arr);

Console.WriteLine("\nDescending Order:");
foreach (int n in arr)
{
    Console.Write(n + " ");
}

Console.WriteLine("\n\nMaximum Value = " + arr[0]);
Console.WriteLine("Minimum Value = " + arr[9]);
Console.WriteLine("Sum = " + sum);
}
}
```

OUTPUT

Enter 10 Numbers:

1

2

3

4

5

6

7

8

9

10

Descending Order:

10 9 8 7 6 5 4 3 2 1

Maximum Value = 10

Minimum Value = 1

Sum = 55
