

Unit Testing using NUNIT framework

1)Write a console based calculator application along with the proper test cases to test the application

using System;

class Calculator

{

static void Main(){

double num1, num2, result = 0;

int choice;

Console.Write("Enter First Number: ");

num1 = Convert.ToDouble(Console.ReadLine());

Console.Write("Enter Second Number: ");

num2 = Convert.ToDouble(Console.ReadLine());

Console.WriteLine("\nCALCULATOR MENU");

Console.WriteLine("1. Addition");

Console.WriteLine("2. Subtraction");

Console.WriteLine("3. Multiplication");

Console.WriteLine("4. Division");

Console.Write("Enter your choice: ");

choice = Convert.ToInt32(Console.ReadLine());

switch (choice)

{

case 1:

result = num1 + num2;

Console.WriteLine("Result = " + result);

break;

case 2:

result = num1 - num2;

Console.WriteLine("Result = " + result);

break;

case 3:

```

        result = num1 * num2;

        Console.WriteLine("Result = " + result);

        break;
case 4:
    if (num2 != 0){
        result = num1 / num2;

        Console.WriteLine("Result = " + result);
    }
    else
    {
        Console.WriteLine("Error: Division by zero is not allowed.");
    }

    break;
default:
    Console.WriteLine("Invalid Choice.");

    break;
}

Console.ReadLine();
}
}

```

OUTPUT

```

PS C:\Users\Nandu\OneDrive\Desktop\trining\wipro\Datatypes> dotnet run
Enter First Number: 2
Enter Second Number: 9

CALCULATOR MENU
1. Addition
2. Subtraction
3. Multiplication
4. Division
Enter your choice: 3
Result = 18

```
